Giggers Architecture & Tech Stack

A comprehensive guide to the technologies, frameworks, and system components of the Giggers app.

01. Frontend Shell & Client-Side

React + TypeScript

Ensures strict type-safety across all data layers, mapping workers, jobs, applications, and wallet transactions cleanly.

Vite

Acts as the rapid build and hot-reloading toolchain, enabling seamless production bundles.

Tailwind CSS

Utility CSS framework powering modern UI, dark mode styling, and dynamic grid layouts.

Zustand Store

Lightweight state store governing authentications, wallet balances, active jobs, and notification states.

02. Progressive Web App (PWA) Capabilities

Giggers has been fully optimized as an installable Progressive Web App, bridging the gap between web applications and native mobile apps.

✓ **Manifest Configuration (`manifest.json`)**

Specifies branding icons, display modes, and standalone launch configurations for home-screen prompts.

✓ **Offline Cache Strategy (`sw.js`)**

Caches essential shell assets and static files locally to load without active networks.

✓ **iOS Compatibility**

Translucent status bars, dynamic status overlays, and full splash screens are integrated for Apple mobile Safari.

03. Backend Services & Database

Supabase BaaS Architecture

The backend database infrastructure is built entirely on Supabase (PostgreSQL), utilizing direct subscriptions and authentication gates.

 **RLS Security Rules**

 **Real-time Messaging**

 **Razorpay Escrow**
